Crime in India: A State-wise Analysis

- Crime in India is a significant concern that affects the safety and well-being of its citizens.

- In this project, we aim to delve into the topic of crime by conducting a State-wise Crime Analysis for the Year 2017. Our goal is to provide an overview of crime statistics across different states in India and uncover valuable insights from the data.

- By analyzing the data, we can gain insights into the prevalence and patterns of crime in the country, which can contribute to a better understanding of the issue and aid in formulating effective strategies for crime prevention.

- We will explore what is the reason behind crime by comparing with unemployment rate and other factors

- Audience: This may include policymakers, law enforcement agencies, researchers, journalists, and members of the general public concerned about safety and security.

In this project I have used R programming and various other R libraries to clean the data and to plot the visualization.

This is the link you can see the project slides:
